KNX
TRAINING AT

Home of Technologies offers training and technical support to all professional stakeholders in the technology market.

We offer a wide range of courses and workshops that are predominantly focused on integrators but are available to any customers require greater technical knowledge. We also run open days for new and existing professional customers. Within our workshops you can bring your live project or tenders to us and we will help you to go through every aspect of lighting, heating, security or AV control using KNX or PLC modules. For distance customers we can even set mock up of your project and you can program it from your office while watching on the camera.

Real Life Training Conditions

We create real life training conditions where trainees can mock up their own installation. We focus on practical solutions not selling milestones. Our training boards are dressed with products from over 20 manufactures and demonstrate real power and usage of KNX protocol. We do not let you leave with 'a number to call in case of problems' – we train you to be a successful and professional integrator. Our training programs focus on multi-platform integration and all exercises are based real life case studies.

A Great Training Atmosphere

We take great pride in our family approach to business, so we aim to create a welcoming environment and treat all our trainees as guests of honour. Trainees experience an amazing atmosphere of professional knowledge combined with a great social time that provides an opportunity to network and exchange ideas. We supply you with great lunches (Mexican, Lebanese, Italian and Halal) and evening dinners.

We are here to guide you, support you and to understand your goals which is why we are willing and able to adjust our exercises to fit with your current live projects.
